

Summary of Address Information for State Adult Prisoners in Montana

Provided to the Montana Districting and Apportionment Commission
for the August 17, 2021, meeting

The Montana Department of Corrections (MDOC) was required to report Census data for the individuals incarcerated on April 1, 2020, in the secure facilities that it manages. Those facilities are:

- the Montana State Prison in Deer Lodge;
- the Montana Women's Prison in Billings;
- the Riverside Special Needs Unit in Boulder; and
- the Pine Hills Correctional Facility in Miles City.

Other secure facilities that housed Montana prisoners on April 1, 2020, and were required to report Census data for those individuals to the U.S. Census Bureau were:

- Cascade County Regional Prison in Great Falls;
- Crossroads Correctional Facility in Shelby; and
- Dawson County Correctional Facility in Glendive.

Facility	Has Residential Address Listed	Has Previous Facility Address Listed	No Residential or Facility Address Listed	Residential Information of Homeless or Transient	Total Adult Prisoners
MDOC Facilities (4)	962	88	882	14	1,946 ¹
Cascade County Regional Prison	82	5	61	2	150
Dawson County Correctional Facility	88	2	51	0	141
Crossroads Correctional Facility	Not available	Not available	Not available	Not available	592 ²
Total	1,132	95	994	16	2,829 ³

Data note: Each facility was responsible for submitting information to the U.S. Census for the prisoners housed in the facility on April 1, 2020. The MDOC queried its Offender Management Information System (or OMIS) to provide residential address information, if any was entered, for each prisoner.

¹ The MDOC also reported 22 youth under 18. The residential addresses are for adults only.

² Facility staff reported there were 592 state inmates at the facility on April 1, 2020. However, they did not have a copy of the prisoner roster or information submitted to the U.S. Census.

³ The total reflects the sum of the Total Adult Prisoners column. To reach a sum of 2,829 for the Total row, add 592 to reflect the missing information from one facility.
